According to offer: you can choose any subject from your home faculty or from another one

If you choose subject from another faculty, you have to go there if you have any problems with this subject. If it fits into your schedule and you have successfully enrolled, then everything is ok 😊.

According to codes: you can enrol directly the subject you want if you know its code.

If you enrol the subject it is not sufficient. You have to go to „create personal timetable“ and show the schedule of the specific subject.

The lecture is automatically added into your schedule. You have to choose the course by clicking on „zapsat“. Then it will be shown in your timetable.

If you want to change a subject:

▪ „Subject“  „Enrolled subjects“  „Cancel“ = your subject will be **deleted**

▪ „Create timetable“  „Remove“ = your subject will be removed from your schedule but not deleted completely. You can still modify it.

Abbreviations used:

Semester:

- W ... winter semester (usually October - February)
- S ... spring semester (usually March - June)
- W,S ... both semesters

Assessment and/or exam:

- Z ... assessment only
- ZK ... exam only
- Z,ZK ... assessment and exam
- KZ ... classified assessment

Some subjects are taught in just one semester (spring OR fall (*winter*))

Z = zápočet (usually means homework, smaller tests or presentations during the whole semester)

ZK = zkouška (means exam in the end of the semester)

KZ = bigger presentation or project in the end of the semester

The subject can be finished by:

Z = only „zápočet“ is required

Z, ZK = you have to get „zápočet“ so you are able to take the exam

ZK = only exam is required

KZ = no exam but a bigger presentation or project required

Lecturer: Ing. Tomáš Bodnár Ph.D.		Weekly load: 4+4	Assessment: Z,ZK
Department: 12101		Credits: 8	Semester: S

Description:

Open and closed set, boundary in E^k . Real function of k -variables. Partial derivatives and differentiability. Gradient and directional derivative. Differential operators div (divergence) and curl (rotation). Function given implicitly. Local and global (= absolute) extremes of a function of more variables.

Double integral, volume (=triple) integral, Fubini theorem. Transformation of integrals to polar, cylindrical and spherical coordinates. A simple smooth curve and line integral of a scalar and vector function. Circulation and Green's theorem.

A potential vector field, independence of a line integral on the path. Simple smooth surface and surface integral of a scalar function and a vector function. Flow of a vector field through a surface. The Gauss-Ostrogradskij theorem.
